

POLYGLASS DETAIL & REPAIR FINISH

FEATURING CURE TECHNOLOGY®

PRODUCT DESCRIPTION

Polyglass Detail & Repair Finish featuring CURE Technology is a highly reflective coating formulated specially to address the installation and system repair needs of Polyglass membranes manufactured with CURE Technology. Designed to extend the life and enhance the performance of the roof system, Polyglass Detail & Repair Finish is bright white and will complement the aesthetic beauty of Polyglass Kool Roofing membranes.

Polyglass Detail & Repair Finish can be used to touch-up all flashing details, and can also be used to coat standard granules used at seam bleed-out and repairs to unify and beautify the roof appearance. In addition to having an initial SRI greater than 96, Polyglass Detail & Repair Finish will enhance granule retention and provide improved abrasion and scuff resistance. Polyglass Detail & Repair Finish is water based and environmentally friendly.

APPLICATION GUIDELINES

Polyglass Detail & Repair Finish is designed to be spray applied over the roofing surface. The viscosity, solids and overall formulation has been optimized to be applied over these uneven surfaces.

The finish touch-up can be applied using various equipment including conventional airless (or air-assist) sprayers, garden style pump sprayers, brush or rollers.

It is estimated when using Polyglass Detail & Repair Finish, that normal spray touch-up at the side and end lap seams of the membrane, should cover approximately 20 – 25 rolls when applied at 4 wet mils, 500 sq ft per gallon. Thicker application rate will reduce number of rolls covered per gallon.
