

ELASTOFLEX V 22

SBS (ELASTOMERIC) BASE/INTERPLY SHEET

PRODUCT DESCRIPTION

Elastoflex V 22 is a Styrene-Butadiene-Styrene (SBS) modified bitumen roofing membrane base sheet. This higher quality membrane is reinforced with a high quality fiberglass mat to ensure strength and excellent dimensional stability to the product. Elastoflex V 22 exhibits superior waterproofing and weathering physical properties.

The top and bottom surfaces are available in sand or factory applied burn-off film. Application methods include mechanically attached, hot asphalt, heat-welded, or as part of cold-applied system. When the top of membrane is surfaced with film, Elastoflex V 22 can be used as a base sheet in self-adhered systems.

Elastoflex V 22 membrane can be used as part of a Polyglass warranted multi-ply system, when combined with Elastoflex V G cap sheets or other approved Polyglass base sheets.

TYPICAL APPLICATIONS

- Use as a base or interply membrane in multi-ply low-slope roofing assemblies.
- Fastened anchor sheet, hot asphalt, cold adhesives or heat fused.
- New roofing, re-roofing and flashing reinforcement.

FEATURES AND BENEFITS

- Versatile for multiple application methods.
- High quality fiberglass mat enhances strength and dimensional stability.
- Provides a strong and durable substrate for other roofing membrane plies.

TECHNICAL DESCRIPTION*

Physical Properties	ASTM Method	ASTM Value	Typical Performance
Peak Load at 0°F (-18°C)	D5147	70 lbf/in (12.3 kN/m)	133 lbf/in (23.3 kN/m) - MD 109 lbf/in (19.1 kN/m) - XMD
Elongation at Peak Load at 0°F (-18°C)	D5147	1%	4.4% - MD 4.7% - XMD
Peak Load at 73°F (23°C)	D5147	30 lbf/in (5.3 kN/m)	50.0 lbf/in (8.8 kN/m) - MD 33.6 lbf/in (5.9 kN/m) - XMD
Elongation at Peak Load at 73°F (23°C)	D5147	2%	5.9% - MD 6.0% - XMD
Ultimate Elongation at 73°F (23°C)	D5147	3%	78.9% - MD 99.4% - XMD
Tear Strength at 73°F (23°C)	D5147	35 lbf (156 N)	116 lbf (517 N) - MD 91.7 lbf (408 N) - XMD
Low Temperature Flexibility (maximum)	D5147	0°F (-18°C)	PASS
Dimensional Stability, max %	D5147	0.50%	0.1% - MD 0.3% - XMD
Compound Stability (pass/fail)	D5147	215°F (102°C)	PASS

*The properties in this table are "as manufactured" unless otherwise noted.

PRODUCT DATA**

Net Coverage (Approx) 150 ft² (15 m²)
 Weight (Approx) 85 lbs (39 kg)
 Thickness (Nominal) 90 mils (2.2 mm)
 Roll Size 49'3" x 39 3/8" (15 m x 1 m)
 Rolls/Pallet 25

**All values are nominal at time of manufacturing

APPLICABLE STANDARDS

- ASTM D6163, Type I, Grade S
- UL Classified
- FM Approved

PRODUCT CODES

- EF22PPC (Film/Film)
- EF22SS (Sand/Sand)
- EF22PSC (Film/Sand)

ELASTOFLEX V 22

SBS (ELASTOMERIC) BASE/INTERPLY SHEET

APPLICATION INSTRUCTIONS

Elastoflex V 22 is intended to be used as a base sheet or interply for new or re-roof applications. Elastoflex V 22 may be applied directly to non-combustible substrates. Elastoflex V 22 requires the installation of an interply and/or compatible granulated cap sheet to complete the roofing system.

- Apply over clean, dry, dust and debris-free substrates. When fully bonding, prime concrete decks and required substrates, prior to application with PG 100 Fast-Drying Asphalt Primer or applicable ASTM D-41 asphalt primer.
- When re-roofing, remove all prior roofing materials down to a clean, dust free substrate. Remove unused or abandoned through-roof penetrations.
- All substrates shall be designed with proper expansion devices.
- Wood decks shall have all joints cross blocked and/or properly supported.
- Installation of Elastoflex V 22 should not adversely affect the ventilation of existing construction.
- Do not apply directly to existing shingles or other unacceptable roof coverings.
- While installing Elastoflex V 22:
 1. Start at the lowest point of the roof.
 2. Unroll the material and allow it to relax as membrane is positioned prior to installation.
 3. Install in a solid mopping of Type III or Type IV asphalt, PG 350 Mod Bit Adhesive, or fully torch the burnoff film creating a pool of asphalt. Pay close attention to the sidelap. Do not overheat to expose or compromise the reinforcement.
 4. Position successive rolls using a minimum 6" endlap and 3" side lap. Asphalt bleed out shall be 1/4" to 3/8" on all seams.
 5. Laps may be lightly rolled with a 4" to 6" wide roller to ensure lap is fused.
- Details and flashing may be installed using hot asphalt, cold application or torch techniques. Check project details for proper installation requirements.
- For detailed drawings and recommended installation procedures of typical roof segments, such as drip edge and T-joint conditions, please refer to our website at, www.polyglass.us.

MANUFACTURING FACILITIES

- Fernley, NV
- Hazleton, PA
- Waco, TX
