

PROJECT REFERENCE

Dublin Valley Christian Center California, U.S.A. Commercial

The main sanctuary features a roof with a 3:12 pitch. Finished with clay roof tiles, the contractor chose to install a three ply, self-adhered Polyglass system beneath the clay roof tiles to ensure maximum protection against the elements. The roof pitch and propensity for high winds didn't allow for the tile roof to have any roof penetrations. The Polyglass system provided the waterproofing protection found when using multi-ply systems, in addition to a surface to which the tiles could be foam adhered.

Products:

- Elastobase® Base Sheet (SBS)
- Elastoflex® SA V Base Sheet (SBS)
- Polyflex® SA P Cap Sheet (APP)
