

# Shriner's Kerack

Commercial - Nevada, U.S.A.

**Elastoflex S6 G** - SBS Granulated Cap Sheet  
**Elastoflex SA Base** - Self-Adhered SBS Roof Membrane

Installed by D&D Roofing  
2020

Shriner's International is a 501C organization consisting of a network of regional chapters, run primarily by volunteers, that offer support and services to those in need across the US and abroad. One of the most notable examples of the organization's work is the many Shriner's Children's Hospitals spread across the country, which provide no-cost transportation and critical health care for children and families with a wide variety of health issues.

Polyglass Special Projects team concluded that the facility needed far more than the project budget could support and decided it was critical to provide assistance for the complicated reroofing project. Polyglass offered to work with D&D Roofing, a local roofing contractor, on an entirely new roof design that would meet the Kerack's needs.

D&D Roofing came up with new roof design that included components to strengthen the building diaphragm. They chose a multi-ply modified bitumen roof system with exceptional performance and high puncture resistance, unlike the single-ply membrane previously under consideration. For decades to come, this local Shriner's facility can continue to provide critically needed meeting and transportation services for children and their families, giving them opportunities to no-cost medical care, as well as provide local residents in the Reno/Sparks area with a low-cost gathering place they can rent to have gatherings without the worries of the past, a troublesome leaking roof.
