

Martha's Vineyard Storage Facility

Commercial - Massachusetts, U.S.A.

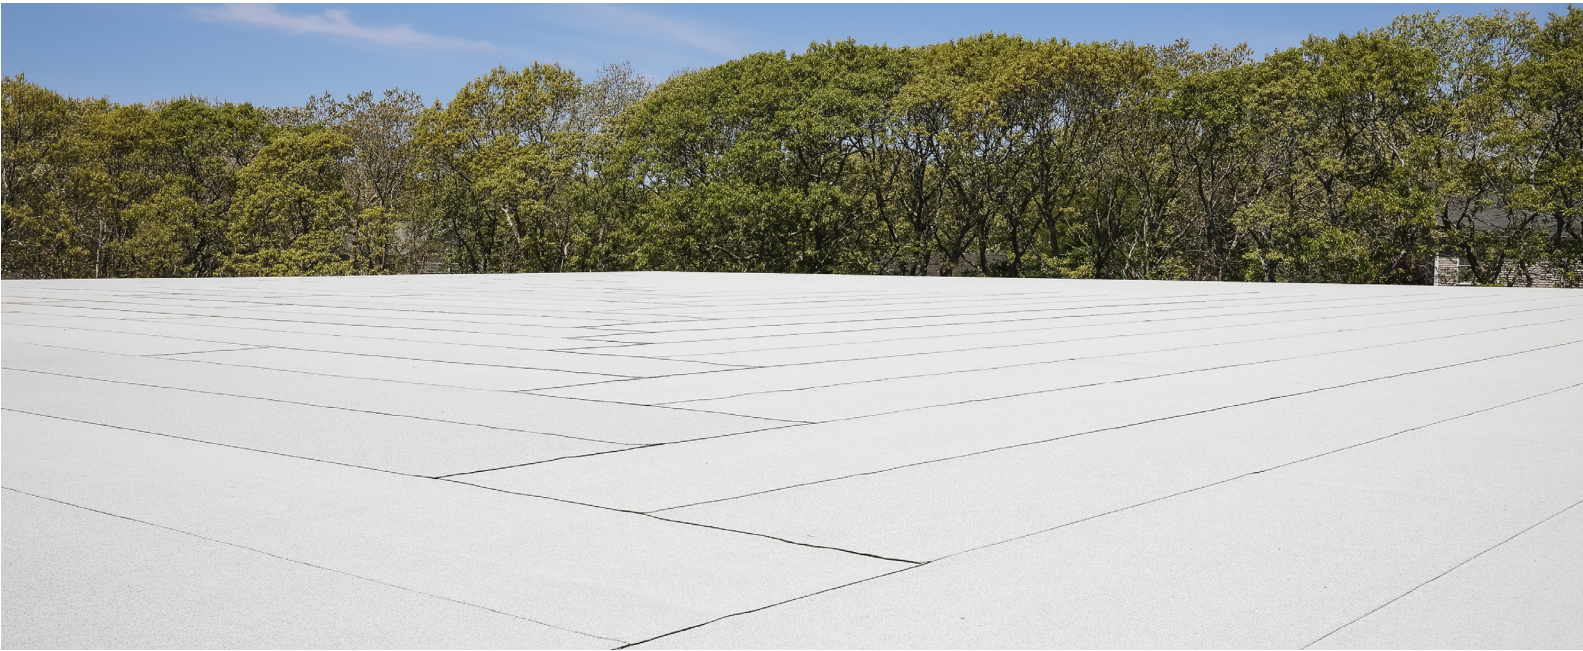

Elastoflex SA Base - Self-Adhered SBS Roof Membrane

Elastoflex SA V - Self-Adhered SBS Roof Membrane

Elastoflex SA P - Self-Adhered SBS Granulated Cap Sheet

200,000 ft² over tapered ISO insulation
Installed by Trademark Services LLC

2021

Trademark Services LLC

Trademark Services focuses on using only the highest quality construction materials on both residential and commercial products, including the use of Polyglass roofing products on several multimillion-dollar homes on Martha's Vineyard Island.

This project called for a new 20,000-square-foot roof installed over newly constructed climate-controlled storage facility. Storing residents' valuables during the off-season required flawless waterproofing and the ability to withstand occasional hurricanes and Nor'Easters that sometimes affect the area, especially in the fall and winter. Additionally, shortened days and the possibility of inclement weather during the November installation meant the team needed a quick-apply base layer to provide immediate waterproofing protection while construction continued.

To meet these challenges, Trademark Services applied a 3-ply self-adhered system with (1) Elastoflex SA Base, (2) Elastoflex SA V and (3) Elastoflex SA P cap sheet. This robust system offers a dynamic combination of fast, easy application and superior weathering performance.
