PolyBrite® 90.1 - High Solids Silicone Roof Coating

50,000 ft² over existing single-ply
Installed by CI Services
2020

Lereta LLC needed a roof restoration for their headquarters in Pomona, California. C.I. Services, with over three decades of experience in high-quality commercial roofing installation, maintenance, and repair services was Lereta's contractor of choice.

C.I. Services determined that a silicone roof coating would restore the integrity of the aging Sarnafil PVC 500 square roof. To meet the requirements of a 15-year warranty and ensure a quality restoration, the contractor turned to Polyglass products. "This project was very straightforward," says C.I. Services General Manager Marcus Clinco. "We pressure washed the roof, primed with the [PolyBrite®] primer and sprayed the [PolyBrite® 90.1] silicone in one pass."

The contractors also performed a field adhesion test to be doubly certain of the results. Multiple pull tests were performed, and a sample of the old roof membrane was sent to Polyglass' main lab for further testing. In the end, the Polyglass products stood up to the test. "The customer was very happy with the final product," says Clinco.
