ROOFING AND WATERPROOFING SYSTEMS

POLYGLASS

MAPEI
GROUP

Gentech faced the challenge of tearing out an old 4-ply BUR roofing system and laying down a new waterproof layer in a short amount of time. They also needed to minimize their impact on the dental office and other tenants who needed to continue conducting business while construction was underway.

To meet these challenges, Gentech installed Polyglass' Stick 1-Torch 1 roofing system: self-adhered Elastoflex SA base sheet and torch-applied Elastoflex S6 G HP cap sheet, over 2-inch ISO boards. Polyglass SA base sheets adhere directly to the ISO board with minimal effort, allowing Gentech workers to quickly make the roof watertight while allowing tradespeople to carry on work inside the building below. This quick installation reduced the total man-hours for the install by at least an hour and a half for each man.
