**POLYGLASS**  
MAPEI GROUP

The Velco Group, a recognized roofing contractor with over 50 years of experience, was chosen to install a new slate roof on a large, mountain lodge-style estate in Texas. The project, involving over 60 roof slopes and a cone-shaped bay window, required a durable underlayment capable of resisting severe weather and tight deadlines. The Velco Group selected Polyglass USA's Polystick MTS Plus Self-Adhered, High-Temperature Roof Underlayment for its proven performance and reliability.

Despite facing heavy rainfall, Polyglass's underlayment ensured the home remained waterproof during extensive renovations, which included removing the old roof, installing siding, and applying copper and slate roofing materials. The success of this challenging project earned The Velco Group the 2023 Golden Hammer Award for Outstanding Residential Slate Project from the North Texas Roofing Contractors Association (NTRCA).

Eric Larsen, The Velco Group's director of operations, praised Polyglass products for their exceptional performance on slate, tile, and metal installations. The 13,400-square-foot roof required a watertight barrier and an underlayment that could be installed around complex structures, ensuring timely completion for a scheduled event at the home. The Polystick® MTS Plus, with its high-temperature resistance and anti-skid surface, was crucial to the project's success.
