GROUP

When Ramon Roofing was selected to remove and replace a slate roof on an estate in Colleyville, Texas, the team knew it needed top-quality products and a dependable partner for the job.

That's when Polyglass, USA stepped in to provide the ultimate roofing underlayment, along with the expertise needed to complete this challenging job.

The job required the removal and replacement of 240 squares of slate, which had to be hand-blended before installation. These dense tiles help regulate a home's temperature and reduce energy costs. And they're fire resistant and environmentally friendly.

Limited ground access when removing and replacing the tiles, the massive size of the project and an extremely steep pitch of 16/12 (or 133.3%) made the project extremely challenging. But the Ramon Roofing team was undeterred!

To complete the project, Ramon Roofing's sheet metal team custom fabricated copper valleys, flashings, standing seam panels, vents and decorative dormers. New K-style seamless copper gutters and downspouts gave this spectacular home a distinctive luxury look.

The project won a Golden Hammer Award for Outstanding Residential Tile Project from the North Texas Roofing Contractors Association (NTRCA). NTRCA's annual Golden Hammer Awards acknowledge outstanding roofing projects, and entries are judged on logistical challenges, quality workmanship, uniqueness, difficulty, time constraints, innovative solutions and safety challenges.

"From start to finish, every aspect of the job went as planned. This was a very difficult and challenging job for our team. However, we embraced the challenge."

- Paul Ramon, Ramon Roofing
