Re: **Guidelines for Approved Mastics When Installing Polyglass Polystick Underlayments in Florida**

As part of our continued commitment to supporting our customers and ensuring long-term system performance, Polyglass is providing the following guidelines regarding the use of approved mastics in steep slope applications involving Polystick underlayments.

For warranted installation, Polyglass requires the use of one of the approved mastics listed below for all applicable detailing, including but not limited to end laps, penetrations, and flashings.

Approved Mastics for Steep Slope Applications:

- PG 500 – Modified Flashing Cement
- PolyPlus 50 – Premium Modified Wet/Dry Flashing Cement

These mastics have been tested and approved for use with Polyglass Polystick underlayments and are required to maintain warranty compliance, as well as to meet the conditions set forth in the applicable Miami-Dade Notices of Acceptance (NOA's) and Florida Product Approvals.

For more detailed application or warranty inquiries, please contact the Polyglass Technical Services Department at 866-794-9659 or via email at Technical@Polyglass.com.
