Polystick® P - Self-Adhered Carrierless Ice & Water
High Temp Underlayment

5,000 ft²
BG Construction
2025

Challenges: A 5,000-sq. ft. family home in Newbury, Massachusetts, faced urgent roofing issues when its deck was found to be rotten. With steep slopes, multiple peaks, and four dormers, this replacement required expert attention and a high-performance product.

Solution: Polyglass partnered with BG Construction, a registered contractor, to complete the project. After removing the old roof, the team selected Polystick® P, a self-adhered, high-temp waterproofing underlayment. Its flexibility made it ideal for navigating the roof's dormers and angles, while its adhesive strength ensured a secure installation under asphalt shingles.

Results: Polystick® P provided durability against ice dams and extreme climate conditions, a slip-resistant surface for safer installation and long-term confidence.

"It's very durable and comes with incredible adhesive value...something we'll use for a long time." - Barry Melanson - BG Construction
