 MAPEI GROUP

400,000 ft²
 Installed by Barrier Roofing
 2025

When a major industrial warehouse in California's Central Valley faced a declining single-ply roofing system, immediate action was essential. As a hub for food-grade supply chain solutions, the facility required a reliable, high-performance roof to protect its precision packaging and distribution operations.

Barrier Specialty Roofing and Polyglass® USA teamed up to deliver a sustainable solution using the PolyBrite 90 Series silicone restoration system.

This fluid-applied strategy provided several key advantages over a traditional tear-off:

- Minimal impact on daily logistics.
- More economical than a full replacement.
- Reduced landfill waste.

The project resulted in a durable, renewable roof that secures the facility's critical infrastructure.

"It was our pleasure to offer our client the PolyBrite silicone system. As always, the attention to detail that Brady Kolden and the Polyglass team bring to our projects is second to none. They are there to answer questions and assist when needed, helping ensure we deliver a roofing solution that truly fits our customer's needs," shared Barrier President Blair Cummings.
